Liaison Report

TO: ISO TC 12/IEC TC 25

FROM: ISO TC 43 & ISO TC 43/SC1

- ISO TC 43 and its subcommittees met in Berlin 21-25 October 2024. A brief report of the current activities of ISO TC 12/IEC TC 25 was presented. The next meeting of ISO TC 43 and its subcommittees will be in Adelaide, Australia in August 2026.
- Comments were provided on the CD of JCGM GUM-5 in December 2024 noting that the draft had no examples of uncertainty calculation for data in as levels (e.g., decibels), requiring conversion to ratios or percent. It would be helpful to show this to ensure all practitioners using level data handle their uncertainty calculations in the same manner. IEC TC 29 – Electroacoustics recently posted a white paper on their website describing this process as well as the magnitude of the overestimation error incurred if the uncertainty calculations are performed in decibels:
https://tc29.iec.ch/wp-content/uploads/2025/04/Overview_of_measurement_uncertainty_for_level_data_IEC_TC29_standards.pdf
It would be helpful if this paper were at least a bibliography reference in the next edition of GUM-5.
- ISO 80000 – Part 8: 2020 – Acoustics is currently out for systematic review. No errors or need for major additions were noted. Unless otherwise noted by the national committees, informally, the recommendation is to CONFIRM.
- The next CD of ISO 80000-15 Quantities and units – Part 15: Logarithmic quantities and their units is apparently pending. We look forward to receiving this for review.

Respectfully submitted,

19 May 2025

Christopher J. Struck – US

ISO TC 43 & ISO TC 43/SC1 Liaison
